PROJECTS

Movie Rated Application
HTML, CSS, JavaScript

- Creating a movie application with an API involves two aspects: the API itself and the application frontend.
- Design API endpoint for fetching movies from search bar and its display by the letters by letters.
- The API endpoints to fetch movie data and display relevant information.
- Design an intuitive and user-friendly interface for navigation and interaction.

Weather Application
Angular, Nodejs, CSS

- The Application made using openweather API in javaScript.
- The application tells the current locations and searched locations latitude and longitude and some additional information like real feel, humidity etc.
- The purpose of this application is user with real time weather information, forecast and other weather related data.

Blog Application
Nodejs, Express, Mongo Db

- The application with two set of users: bloggers and readers.
- Bloggers use to create posts, edit post and submit post for review by their editors.
- Readers use to view new post on a particular blog as they are published, read individual blog post, comment, like on these posts.
- Created this application is to provide hassle-free accessing of the posted blog, entries, topics etc.
